

# RFC 1925

Zbyněk Pospíchal  
5.5.2022

# Dvanáct síťových pravd

1.4.1996

(1) It Has To Work.

(2) No matter how hard you push and no matter what the priority, you can't increase the speed of light.

**Errata: You can, however, slow it down.**

(2a) (corollary). No matter how hard you try, you can't make a baby in much less than 9 months. Trying to speed this up *\*might\** make it slower, but it won't make it happen any quicker.

(3) With sufficient thrust, pigs fly just fine. However, this is not necessarily a good idea. It is hard to be sure where they are going to land, and it could be dangerous sitting under them as they fly overhead.

(4) Some things in life can never be fully appreciated nor understood unless experienced firsthand. Some things in networking can never be fully understood by someone who neither builds commercial networking equipment nor runs an operational network.

(5) It is always possible to agglutinate multiple separate problems into a single complex interdependent solution. In most cases this is a bad idea.

(6) It is easier to move a problem around (for example, by moving the problem to a different part of the overall network architecture) than it is to solve it.

(6a) (corollary). It is always possible to add another level of indirection.

(7) It is always something

(7a) (corollary). Good, Fast, Cheap: Pick any two (you can't have all three).

(8) It is more complicated than you think.

(9) For all resources, whatever it is, you need more.

(9a) (corollary) Every networking problem always takes longer to solve than it seems like it should.

(10) One size never fits all.

(11) Every old idea will be proposed again with a different name and a different presentation, regardless of whether it works.

(11a) (corollary). See rule 6a.

(12) In protocol design, perfection has been reached not when there is nothing left to add, but when there is nothing left to take away.

## Security Considerations

This RFC raises no security issues. However, security protocols are subject to the fundamental networking truths.

Otázky ?

Projevy nesouhlasu ?

(13) In certification or any other form of training, a Network Engineer is under obligation to research all technologies in order to determine the original design goal. You must approach all technologies while asking "WHY". It is no longer acceptable to simply memorize a given text and then portray this as actual knowledge on the referenced subject.
